

ADMINISTRATOR BUSINESS PROCESS

The administrator creates users and sends an invitation to Employers and Students to register to the portal. He then reviewed internship listings posted by employers and send a confirmation to the employer. He goes on to send the available internship listings to students for them to make formal application and forward students CV to the employer. Also, the administrator tracks the application process and receives a notification of feedback about students from the employer.

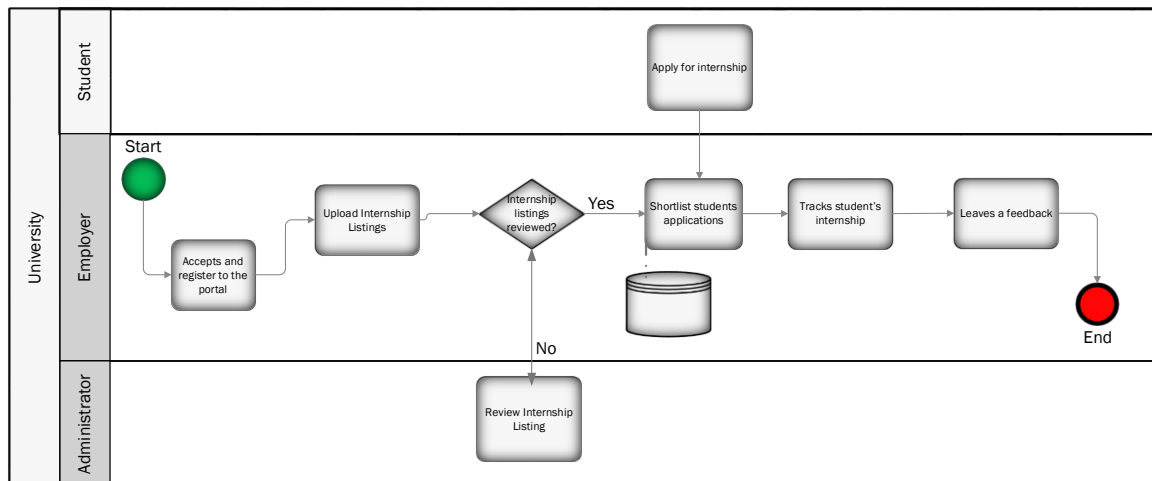

ADMINISTRATOR BUSINESS MODEL

EMPLOYER BUSINESS PROCESS

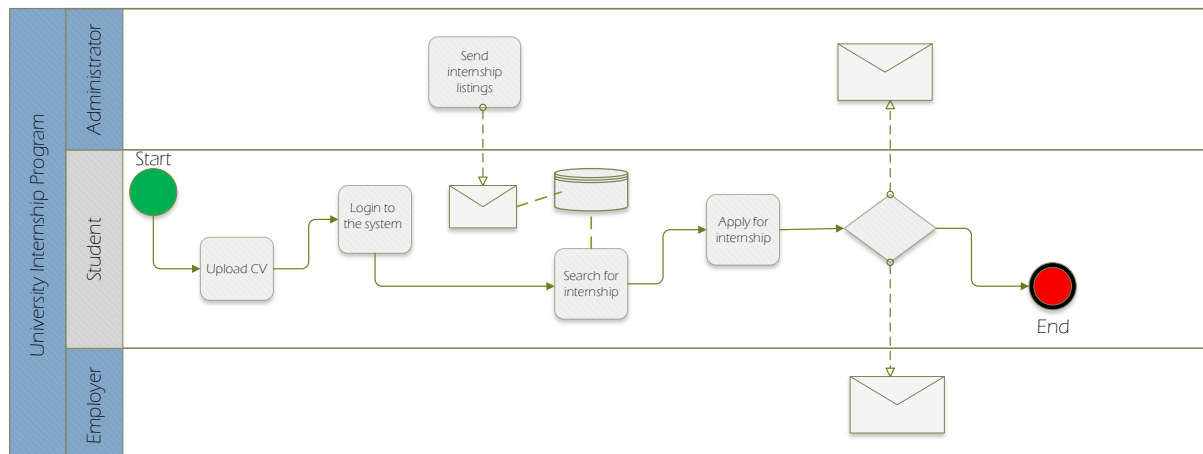

The employer accepts an invitation from the administrator to register to the portal. Employer post internship listings on the portal and waits for the administrator to review the listing and invite students to make applications. The system allows the employer to select a student and track student's internship listing progress. If the student has completed the internship, the employer then provides a feedback. If the student has not done the internship, the employer goes back to the internship listing and select a different student and repeat the process.

EMPLOYER MODEL

STUDENT APPLYING

Upload CV to the system, after uploading the CV then log into the system to manage their CV. Search for suitable internships, find an internship then request for that internship. Administrator sends student internship application. Apply for Internship and send the application.

STUDENT ACCEPTING

Receives a yes confirmation from the administrator based on application. If yes, the application is approved. The student accepts the internship or declines. The student accepts the internship then attends. Complete the internship and provide feedback and stores it on the system.
